Disrupting the supply chain - a common project of IBM & Maersk

The New York Times
Blockchain: A Better Way to Track Pork Chops, Bonds, Bad Peanut Butter?

Cargo containers are loaded on a Maersk ship at the Port of Mombasa in Kenya.

PIL, PSA, IBM Conclude Blockchain Trial from Chongqing to Singapore

Shipping company Pacific International Lines (PIL), port group PSA International (PSA) and technology company IBM Singapore (IBM) have completed a blockchain-based supply chain platform trial.

As informed, the companies worked on a proof of concept (POC) exercise, built on IBM Blockchain Platform, applying and then testing the platform to track and trace cargo movement from Chongqing to Singapore via the Southern Transport Corridor.

200 Information exchanges

- Valuable data is trapped in organizational **silos**
- **Diverse perspectives** on transaction state
- **Manual and time-consuming** business processes
- Clearance processes subject to **fraud**

There is significant potential to improve information exchange within the supply chain

GLOBAL TRADE IS HIGHLY INEFFICIENT AND BURDENED BY PAPER-BASED PROCESSES

Data trapped in organizational silos

Information is held in paper and various digital formats across dozens of service providers along the supply chain, requiring complex, cumbersome, and costly peer-to-peer messaging. The result is inconsistent information across organizational boundaries, latency in obtaining shipment visibility, and blind spots that hinder the efficient flow of goods.

Manual, time-consuming, paper-based processes

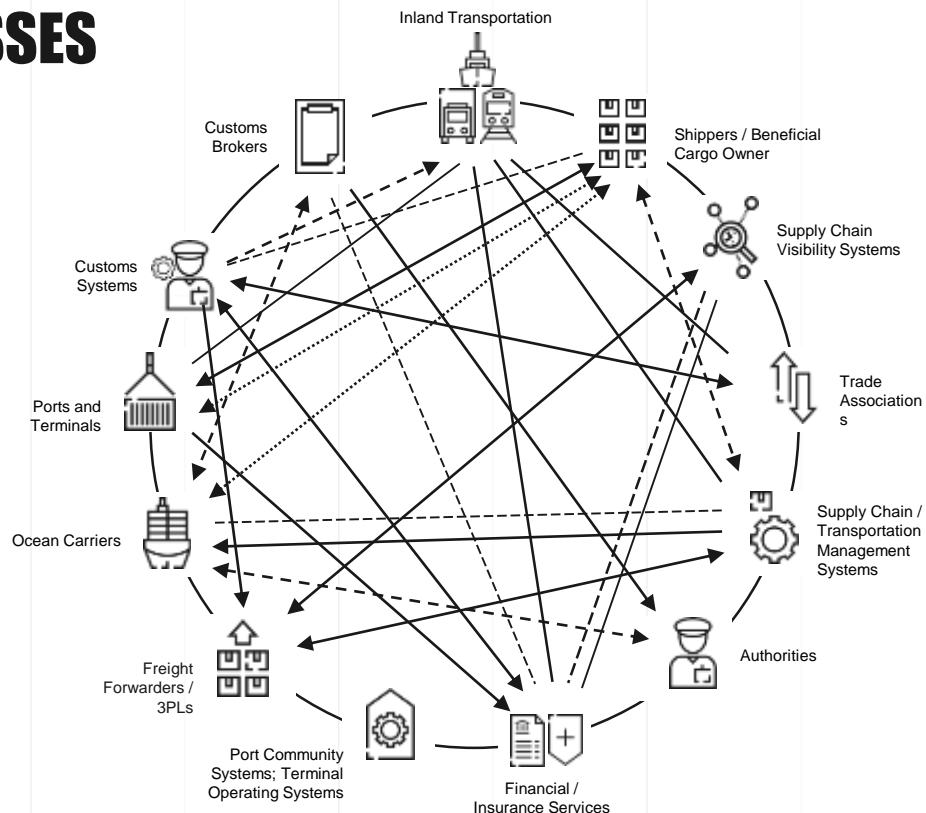

The collection and processing of up-to-date data, as well as inefficient trade document exchange, requires manual checks and frequent follow-ups and results in errors, delays and high compliance costs. Late filings are common due to missing information.

Clearance takes too long and is often subject to fraud

Risk assessments by customs authorities lack sufficient and trusted information resulting in high inspection rates, added prevention measures against fraud and forgery, and delayed customs clearance.

High costs and poor customer service

These challenges have significant downstream repercussions. The inability to forecast and plan effectively, address supply chain disruptions in real-time, and share trusted information across the supply chain leads to excessive safety stock inventory, high administrative costs, operational challenges, and ultimately poor customer service.

OUR JOURNEY

An open and neutral blockchain-based platform that is digitizing the global supply chain and transforming trade

ECOSYSTEM PARTICIPANTS

NETWORK MEMBERS

Ocean Carriers / NVOCCs

Provide the transportation plan, information about the disposition of shipments across the ocean leg, and critical documents such as the BoL; access end-to-end supply chain data in real time including events directly from shipper, intermodal, customs and 3PLs

Ports / Terminal Operators

Provide information about the disposition of cargo within the boundaries of the port / terminal; access real-time information to enrich port collaboration and improve terminal planning

Intermodal Operators

Provide information on the disposition of shipments carried on trucks, rail, barges, etc.; improve planning and utilization of assets given real-time access to end-to-end supply chain events for shipments

Government Authorities

Provide information about the export and import clearance status for shipments into and out of the country; access end-to-end supply chain information for improved customs clearance and risk assessments

TRADELENS CLIENTS

Shippers/BCOs

Engage with the platform as a consumer of shipping information to improve supply chain management, as a means to collaborate with supply chain partners, and as a way to streamline clearance

Freight Forwarders / 3PLs

Engage with the platform as a consumer of shipping information, a means to collaborate with customers and supply chain partners, and a way to improve customs brokerage capabilities

Financial Services

Engage with the platform as a consumer of supply chain information for a variety of trade finance, insurance, and other purposes to reduce the risk of fraud and increase speed and flexibility to customers

ECOSYSTEM DATA

Foundational data

The core data and documents to track and manage shipments end-to-end

- + Projected 60% of global container shipping volume
- + Vast number of trade lanes covered
- + **20+ Million containers per year today**

Enrichment data

Supplements foundational data, in real-time and direct from the source

- + Rapidly growing network
- + Extensive port / terminal coverage

TRADELENS

500M Events
per year

5M Documents
per year

These numbers are estimated to double with the recent addition of new global ocean carriers to the network

* Ocean carriers who are not Network Members can provide data as requested by their customers

OCEAN CARRIERS

The ocean leg is at the heart of a container shipment journey, and as such carriers are the linchpin of the end-to-end information model by providing the booking that links all parts of the journey

Given the central role that carriers play today in safeguarding and distributing key information and documents across parties to a shipment, they are in a unique position to govern the Blockchain network that will transform the industry's information sharing model

TradeLens is currently in partnership with 13 global ocean carriers*

* CMA CGM, MSC, ONE and Hapag-Lloyd have agreed to join TradeLens; final membership pending. Speak with your TradeLens representative for a report on current onboarding status.

3PL AND INTERMODAL

Third-party logistics providers (3PLs) and Freight Forwarders are central to the global movement of goods. As a solution designed for the entire supply chain industry, TradeLens is focused on maximizing the value of these participants by:

- + Improving collaboration with their customers by leveraging global standards and nuanced data control
- + Tangibly bringing together the commercial, documentary and operational elements of supply chain management.

Intermodal operators handling their customers' cargo want more visibility up and down the supply chain so they can act fast and lower the cost of every shipment.

TradeLens provides trustworthy data that helps them to predict and optimize equipment utilization, speed up pick-ups and drop-offs and reduce queueing times.

* This list of 3PLs and intermodal operators is not exhaustive. Speak with your TradeLens representative for a complete list, along with current onboarding status.

GOVERNMENT AUTHORITIES

Authorities and agents in charge of the import and export of goods want powerful new tools to help them simply and clearly identify risks and efficiently process huge volumes of trade that cross their borders.

TradeLens is working with authorities from 9 countries to deliver better information sharing, less manual paperwork, and easier connections to national single window platforms.

MORE INFORMATION

JOINING TRADELENS

- + TradeLens is available today for both TradeLens Clients and Network Members
- + **TradeLens Clients** can get up and running quickly and gain access to share trade documents and near real-time, high-fidelity shipping milestones across parties via the TradeLens web app or by consuming and publishing data via API
- + **Network Members** provide data, and can get access to data, according to the published TradeLens Data Sharing Specification

Interested participants should contact their local IBM or Maersk sales representatives

TRADELENS ONLINE

- + Visit us at www.tradelens.com for more information
- + If you would like to get in contact, please provide your details [here](#)
